What Does This Dropout Risk Tool Do?

Worried about student engagement or academic risk? 🎓

This tool helps identify students who may be at risk of dropping out — so support can come at the right time.

By analyzing data like grades, attendance, assessment scores, and course difficulty, the system groups students into risk clusters. This gives educators insights into which students might need extra attention or intervention.

 **Use Case:** “How is Student #123 doing overall? Are they in a high-risk cluster?”
